Volume License Installation Instructions

Your Inspiration volume license can be set up in either a local or network configuration.

LOCAL CONFIGURATION

This configuration places the complete Inspiration application on each licensed workstation. The advantages of this approach are that it requires no network bandwidth and provides maximum control for users. To install Inspiration on a single workstation, please refer to the installation instructions included in the Inspiration Getting Started Guide. You will find your serial number on your volume license agreement.

Tip: If you choose local configuration, you might consider installing and personalizing Inspiration on a single workstation and then using your network to distribute the application to all licensed workstations. All items required for distribution are contained in the Inspiration 7 folder created during a single-user install.

Windows®: All workstations, except those running Windows 2000, require an additional installation to add text-to-speech capabilities. On each workstation, run both `sphapi.exe` and `msttsa221.exe`, found in the TTS Support folder on your Inspiration CD-ROM. Workstations running Windows 95 or NT require an additional installation to allow for the creation of personal symbol libraries. On each workstation, run the "`shfolder.exe`" installer found in the Net Support folder on your Inspiration CD-ROM.

Macintosh®: All workstations, except those running Mac OS 9 or higher, require an additional installation to add text-to-speech capabilities. On each workstation, run the Installer located in the English Text-to-Speech folder on your Inspiration CD-ROM.

NETWORK CONFIGURATION

This configuration places the Inspiration application on a network server. The advantages to this approach are the application is easily managed and centrally controlled. For this configuration to work properly, network users must be able to run software from the Inspiration folder on the server. The administrator must also create appropriate shortcuts, Start menu listings, or aliases on each workstation licensed to run Inspiration.

When Inspiration is run from a server, users are not able to modify the shared common libraries, templates, examples, or dictionaries stored on the server. However, they do have the ability to create their own custom libraries, templates, and dictionaries. They can also alter application preferences to meet their own needs.

- **Symbol Libraries**
When users create new symbol libraries, the libraries become "personal libraries" which are saved in a user-specific folder. On a Macintosh, this folder is typically the user's Documents folder. On Windows computers, this folder is usually the My Documents folder.
- **Templates**
Inspiration 7 introduces the ability to save templates to any location. However, this excludes the write-protected Inspiration Templates folder on the server. Templates here are available to all users, but users are not able to save to this directory.
- **User Dictionaries**
Each user can create a personal spelling dictionary. Personal user dictionaries are found in the following location: `Inspiration Software\Inspiration\70`. The Inspiration Software folder can be found in the user's local Settings or Preferences folder; the exact path is dependent on the specific operating system. If the users do not have write access to the local hard drive, the folder can be found in the user profile's Settings or Preferences folder.

- **User Preferences**
Users can modify Inspiration preferences to meet their requirements. These include Application Properties, choice of default template, and list of available fonts. User preferences are stored in the same location as the user dictionaries.

Once the installation is complete, network users are able to access Inspiration documents stored on the server in the folders for which they have permission. Users must have read, write, and delete permission for the folder(s) in which they save files on the server. Inspiration 7 documents saved on the server are available to multiple users—if a file is already open by a user, subsequent users may open untitled copies of that file. Inspiration templates always open as untitled documents.

Depending on the version of the operating system these workstations are using, you may need to run an additional installation to add text-to-speech or support personal library capabilities on each. See the Workstation Setup section later in this document for details.

Network/Operating System Support

Inspiration supports both Windows and Macintosh workstations in a network configuration. However, a separate installation and configuration is required for each platform. In particular, if installing on a server, please install each OS-specific version into a separate folder.

- Networks supported include: Windows NT 4.0, Windows 2000, Novell 4.1 with long filename support, Novell 5.0, Novell 6.0, AppleShare, and Mac OS X Server. Please note that installing to Novell servers from Mac OS X via the Prosoft Novell clients 1.01 and 1.02 for Mac OS X is not supported. Further, using Inspiration through Novell Native File Access from Windows workstations is not supported. Netware 5 Services for AppleShare is not supported.
- Workstation operating systems supported include Windows 95, 98, ME, NT 4.0, 2000, or XP; Mac OS 7.1 and higher, including OS X.
- Windows: The Inspiration installation supports the Universal Naming Convention (UNC), so mapped drives are not required. Note to Novell users who use NDS: If you plan to use a UNC path to your server, please use the following format: \\tree\.server_volume.context\
- Macintosh: If you're running on a Novell 4.1 network and plan to use Inspiration when logged in as administrator, please lock the Inspiration application (in the Get Info dialog) after completing the installation process.

Server Installation

Windows

1. From a workstation, double-click INSTALL.EXE on the CD-ROM. If necessary, the installer will ask to add the required text-to-speech software to your workstation. Click OK to install. After updating the computer's system software, your computer will restart and automatically continue the Inspiration installation.
2. When the initial setup dialog displays, click Next.
3. Read the Welcome dialog box, and then click Next.
4. Read and accept the terms of the license agreement.
5. In the Destination Directory field, enter a path to (or browse for) the folder on the server in which you'd like to install Inspiration. Click Next.
6. Choose Easy Install or Custom Install, and then click Next
 - a. Choose Easy Install to install the full Inspiration application, including symbols, templates, examples, and Help.
 - b. Choose Custom Install to selectively install symbols, templates, examples, and Help.
7. Follow the instructions on your screen to complete the installation process.
8. When installation is complete, Inspiration starts automatically. The Personalize Inspiration dialog appears.
 - a. Click in the School/Organization box, then enter the name of your school or organization.
 - b. Click in the Serial Number box, then enter your serial number (found on your volume license agreement).

9. Exit Inspiration and set permissions for the Inspiration 7 folder to be read only, read and execute, or read and filescan (depending on the server operating system) for all users. This restricted permission level is required for multiple users to run a shared copy of Inspiration at the same time; if users are allowed to write to the Inspiration folder, all users after the first will be prevented from starting Inspiration.

Note: The "Everyone" group, which is available as a default group to which you can assign permissions on most server operating systems, can cause Inspiration to behave as though the first user has write access to the Inspiration folder. Avoiding the "Everyone" group and instead, using other, more specific, groups like "Users" or "Domain Users" will avoid this problem.

Macintosh

1. Double-click the appropriate Inspiration 7 Install icon that appears on the CD-ROM. Select Inspiration 7 install for Mac OS versions 7.1-9.x, or Inspiration 7 Install OSX for Mac OS X. Please use the installer that corresponds to your workstations' operating system. If you have both Mac OS X workstations and workstations with older versions of the Mac OS, please perform two separate installs, one for each platform. It may be necessary to install the Classic and OS X versions on separate volumes to ensure users don't inadvertently launch the version which is incompatible with their workstation.

If necessary, the installer will ask to add the required text-to-speech software to your computer. Click OK to install. After updating the computer's system software, your computer will restart and automatically continue the Inspiration installation.

2. Read the Welcome dialog box, and then click Continue.
3. Read and accept the terms of the license agreement.
4. From the drop-down menu, choose Easy Install or Custom Install.
 - a. Choose Easy Install to install the full Inspiration application, including symbols, templates, examples, and Help.
 - b. Choose Custom Install to selectively install symbols, templates, examples, and Help.
5. Choose the Install location by selecting the drive and folder in which you wish to install Inspiration.
6. Click Install.
7. When installation is complete, Inspiration starts automatically. The Personalize Inspiration dialog appears.
 - a. Click in the School/Organization box, then enter the name of your school or organization.
 - b. Click in the Serial Number box, then enter your serial number (found on your volume license agreement).
8. Exit Inspiration and set permissions for the Inspiration 7 folder to be read only, read and execute, or read and filescan (depending on the server operating system) for all users. This restricted permission level is required for multiple users to run a shared copy of Inspiration at the same time; if users are allowed to write to the install folder, all users after the first will be prevented from starting Inspiration.

Note: The "Everyone" group, which is available as a default group to which you can assign permissions on most server operating systems, can cause Inspiration to behave as though the first user has write access to the Inspiration folder. Avoiding the "Everyone" group and instead, using other, more specific, groups like "Users" or "Domain Users" will avoid this problem.

Workstation Setup

Windows

1. Copy the Inspiration 7 Start menu item from the first workstation (the one you installed from) to all licensed workstations. The path to that item is \Windows\Start Menu\Programs\Inspiration 7.

Note: If the path to the install folder is referenced differently on other workstations—different drive mappings or UNC paths, for example—then you may need to edit the copied Start menu listings to reflect those different paths. Alternatively, you could just create the Start menu listings from scratch on each workstation.

2. If you also made a desktop shortcut on the installed workstation, copy it to the other workstations. The shortcut's target should point to the file insp7.exe, located in the server install folder.

3. All workstations, except those running Windows 2000, require an additional installation to add text-to-speech capabilities. On each workstation, run both sphapi.exe and msttsa221.exe, found in the TTS Support folder on your Inspiration CD-ROM.
4. Workstations running Windows 95 or NT require an additional installation to allow for the creation of personal symbol libraries. On each workstation, run the "shfolder.exe" installer found in the Net Support folder on your Inspiration CD-ROM.

Macintosh

1. On one workstation, create an alias to the Inspiration® 7 application file on the server.
2. Copy the alias from the first workstation to all other workstations that are licensed to run Inspiration.
3. All workstations, except those running Mac OS 9 or higher, require an additional installation to add text-to-speech capabilities. On each workstation, run the Installer located in the English Text-to-Speech folder on your Inspiration CD-ROM.

Version 7 Network Install Notes

1. The Inspiration 7 installer does not automatically replace a previously installed version of Inspiration. If you no longer need to support earlier versions of Inspiration, you will need to uninstall or manually delete these earlier releases from the server(s) or workstations.
2. The file format used by Inspiration 7 differs from that used in previous versions. However, Inspiration 7 includes the option to Save as an Inspiration 6 document.
3. If you've modified symbol libraries or templates in Inspiration 5 or 6, you can copy them into the corresponding Inspiration 7 folders and continue to use them. If Inspiration is running when you copy the files, restart it before attempting to use those copied files.
4. If your current Inspiration configuration includes Windows 3.1 or Windows For Workgroups 3.11 workstations, you must continue to use a previous version of Inspiration to support those systems.
5. Prior to Inspiration 6, there were separate 68K and PPC versions of Inspiration for the Macintosh. With Inspiration 7, there's a single, "fat" binary application installed. This single application will run on Macintosh models based on either of those processors.
6. The Inspiration User's Manual and other written documentation is available in the form of PDF files which may be distributed to users. Adobe® Acrobat® Reader is required to view or print this information. These documents can be found in the Inspiration Documentation folder on the Inspiration 7 CD-ROM. They are also included in the Inspiration 7 directory created when the software is fully installed.

Customer Service

Inspiration Software, Inc. provides customer service and technical support for registered users. Be sure to return your license agreement to take advantage of our support services.

Our support services are available Monday through Friday from 8 a.m. to 5 p.m. Pacific Time.

Telephone: 503-297-3004
Fax: 503-297-4676
Email: techsupport@inspiration.com
